our team

Christina Mangovski, RPA-C graduated with a master’s degree in the Physician Assistants Program at LeMoyne College in Syracuse, NY. She is nationally certified by the National Commission on Certification of Physician Assistants and is an active member of the American Academy of Physician Assistants.

William A. Geary, M.D., PhD graduated from the University of Virginia School of Medicine, where he also completed his pathology training. Dr. Geary is a board-certified physician and an active member of various professional organizations.

John E. Schrecengost, M.D. is a board-certified physician who graduated from the University of Pittsburgh School of Medicine, and completed his pathology training at the University of Virginia Health Sciences Center. Dr. Schrecengost is also an active member of multiple professional organizations.

Michael Duff, M.D. is a board certified radiation oncologist and graduate of the SUH at Buffalo School of Medicine. He completed an internship in Internal Medicine in Buffalo, and trained in radiation oncology at the University of Minnesota. Dr. Duff is an active member of the American Society for Therapeutic Radiology and Oncology (ASTRO). He is well versed in various radiation techniques, such as 3D-conformal radiation therapy and Intensity Modulated Radiation Therapy (IMRT).

Dhiren K. Shah, M.D. is a board-certified radiation oncologist. He graduated with honors from Lehigh University and completed his radiation oncology training at Robert Wood Johnson/Cooper Hospital in New Jersey. He is a member of many clinical societies, including the American Society for Therapeutic Radiology and Oncology, as a fellow of the American College of Radiation Oncology and as the vice chair for the prestigious New York State Board of Medicine.

cancercarewny.com

dedicated to curing cancer today.
Our goal is to cure cancer.

Many different types of cancers can be treated successfully with radiation, including the following:

Prostate Cancer
The cause of prostate cancer remains unknown. The risk of developing prostate cancer increases as a man ages. A family history of prostate cancer in a brother or a father also doubles one’s chances of getting prostate cancer. In the very early stages of prostate cancer, there usually are no symptoms.

Breast Cancer
Breast cancer is the most common cancer in women. Some symptoms associated with breast cancer are a new lump in the breast or underarm, thickening or swelling of the breast, irritation/dimpling of the breast, pain in the nipple area, and nipple discharge.

Lung Cancer
Lung cancer is a disease caused by the rapid growth and division of cells that make up the lungs. Coughing, shortness of breath, wheezing, chest pain, loss of appetite and weight loss are common symptoms experienced with lung cancer.

Central Nervous System (CNS) Cancer
CNS cancer affects either the brain, spinal cord or both. Signs and symptoms include headache, seizures, and neurological dysfunction affecting speech, memory, and/or vision. Gamma Knife is a radiosurgery technique that has proven very effective in the treatment of CNS cancers.

Head and Neck Cancer
This type of cancer is one that occurs in the head, nasal cavity, sinuses, lips, mouth, salivary glands, throat or larynx. Common symptoms of cancer of the head and neck include persistent pain in the throat, pain/difficulty swallowing, persistent hoarseness or change in voice, pain in the ear and bleeding in the mouth or throat.

Bladder Cancer
Carcinogens (cancer-causing agents) in the urine may lead to the development of bladder cancer. The primary symptom is blood in the urine. Other symptoms may include frequent urination and pain upon urination.

Gastrointestinal (GI) Cancer
GI cancer can form in the lining of the GI tract, which includes the small intestine, large intestine, stomach, pancreas and liver. Depending on the location of the cancer, causes, risk factors, and symptoms may vary.

Other cancers successfully treated by radiation include:

- Testicular Cancer
- Colorectal Cancer
- Leukemia
- Thyroid Cancer
- Sarcomas
- Lymphomas (including Hodgkin’s & non-Hodgkin’s)
- Skin Cancer
- Cervical Cancer
- Ovarian Cancer
- Metastatic Cancers
- And Many Others
